«Apier»

«Templater»

consume

«Clienter»

«Schemaer»

consume

consume

consume

Responsibilities :
* resources CRUD operations
* validate api state
* handle api URLs

Responsibilities :
* handle vm resource template logic (getTemplateList, create vm from template, create configuration override file etc.)

Responsibilities :
* HTTP request and response creation/emission/reception

Responsibilities :
* hashicorp/helper/schema object handle (this object store the status of a resource after a read on configuration plan file or CRUD operation on distant resource, it is too used as a media before updating resource state file.tfstate)
* handle resource dynamic field logic
